#### **Investment Objective and Strategy**

The fundamental investment objective of **First Trust Tactical Bond Index ETF** (the “First Trust ETF”) is to replicate, to the extent possible, the performance of a total return fixed income index, net of expenses. Currently, the First Trust ETF seeks to replicate the performance of the NASDAQ IBIS Canadian Preservation Index CAD TR<sup>SM</sup> (the “Index”), net of expenses.

The investment strategy of the First Trust ETF is to invest in and hold a proportionate share of the constituent securities of the Index, or other securities, to seek to replicate the performance of the Index. The Index seeks to provide a risk managed, global income portfolio which generates a high yield for the risk taken and consists of liquid income-bearing exchange traded funds and other exchange traded products across various asset classes. The First Trust ETF may also hold cash and cash equivalents or other money market instruments to fund current liabilities.

The Manager may use a sampling methodology in selecting investments for the First Trust ETF. As an alternative or in conjunction with investing in and holding constituent securities, the First Trust ETF may also invest in other securities to obtain exposure to the constituent securities of the applicable Index in a manner that is consistent with the investment objective and investment strategy of the First Trust ETF.

#### **Risk**

The risks associated with an investment in the First Trust ETF remain as discussed in the ETF’s most recent prospectus. There have been no significant changes during the period that affected the overall level of risk associated with the First Trust ETF.

#### **Results of Operations**

##### ***General***

The First Trust ETF’s net asset value as of June 30, 2018 was \$29,739,016 or \$19.19 per unit. The First Trust ETF’s net asset value as of December 31, 2017 was \$34,097,106 or \$19.48 per unit.

##### ***Investment Performance***

The First Trust ETF returned 0.23% for the six-month period ended June 30, 2018. This compares with the Index return of 0.57%. Unlike the Index, the First Trust ETF’s return is net of fees and expenses.

The First Trust ETF was invested at all times during the period in the securities of various Canadian ETF providers including BlackRock Asset Management Canada Limited, and BMO Asset Management Inc. The First Trust ETF tracks an index which applies a relative strength model on a quarterly basis. During the period, the First Trust ETF tactically rebalanced twice to align the weights of the fund components with the index.

As an asset class, Canadian federal and provincial real return bonds was the top contributor to the First Trust ETF’s performance. The asset class was represented by the iShares Canadian Real Return Bond ETF in the First Trust ETF’s portfolio. The performance of real return bonds is linked to the rate of inflation. Bank of Canada announced that Canadian CPI inflation has increased from 1.8% at the end of 2017 to 2.5% at the end of June 2018 which has increased the market price of Canadian real return bonds, as well as their rate of return.

#### **Recent Developments**

The portfolio was rebalanced twice during the first half of 2018. In January, positions in High-Yield U.S. Bonds and Emerging Markets Bonds were removed, and positions in Convertible Bonds, Canadian Investment Grade Bonds, and Canadian Government Bonds were added. In April, the positions in Convertible Bonds and Canadian Investment Grade Bonds were removed, and replaced with an increased position in Canadian Government Bonds, and a new

(1) Management expense ratio is based on total expenses (excluding commissions and other portfolio transaction costs) for the stated period/year, including the First Trust ETF's proportionate share of the MER of any underlying fund in which the First Trust ETF has invested, and is expressed as an annualized percentage of daily average net asset value during the period/year.

(2) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net asset value during the period/year. This includes the First Trust ETF's proportionate share of the commissions of any underlying fund in which the First Trust ETF has invested.

(3) The First Trust ETF's portfolio turnover rate indicates how actively the First Trust ETF's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the First Trust ETF buying and selling all of the securities in its portfolio once in the course of the period/year. The higher a First Trust ETF's portfolio turnover rate in a period/year, the greater the trading cost payable by the First Trust ETF in the period/year, and the greater the chance of an investor receiving taxable capital gains in the period/year. There is not necessarily a relationship between high turnover rate and the performance of a First Trust ETF.
