Forward-looking Statements

This document may contain forward-looking statements relating to anticipated future events, results, circumstances, performance or expectations that are not historical facts but instead represent beliefs regarding future events. By their nature, forward-looking statements are based on assumptions and are subject to inherent risks and uncertainties. There is significant risk that forward-looking statements will not prove to be accurate. Readers of this document should not place undue reliance on forward-looking statements as a number of factors could cause actual future results, conditions, actions or events to differ materially from the expectations, estimates or intentions expressed or implied in the forward-looking statements. These factors include but are not limited to market and general economic conditions, interest rates, foreign currency exchange rates, the extent of industry sector exposure, the performance of the securities of the issuers held in the portfolio and regulatory developments and the risks detailed in the First Trust ETF’s prospectus. The Manager does not undertake and specifically disclaims any intention or obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

Investment Objective and Strategy

The fundamental investment objective of **First Trust Cloud Computing ETF** (the “First Trust ETF”) is to replicate, to the extent possible, the performance of an index of U.S. companies involved in the cloud computing industry, initially the ISE CTA Cloud Computing Index™.

The ISE CTA Cloud Computing Index™ is a modified equal weighted index designed to track the performance of companies involved in the cloud computing industry. To be included in the index, a security must be classified as a Cloud Computing company by the Consumer Technology Association.

Risk

The First Trust ETF provides exposure to its new index by investing all or substantially all of its assets in an underlying U.S. index fund known as First Trust Cloud Computing ETF (the “Underlying Fund”), which is managed by the First Trust ETF's portfolio advisor.

The risks associated with an investment in the First Trust ETF is discussed in the First Trust ETF's most recent prospectus.

Results of Operations

General

The First Trust ETF's net asset value as of June 30, 2022 was \$2,096,332 or \$14.97 per unit. The First Trust ETF's net asset value as of December 31, 2021 was \$4,475,026 or \$23.55 per unit.

For the six-month period ended June 30, 2022, the First Trust ETF paid total cash distributions per unit of \$0.3699. In addition, the First Trust ETF declared cash distributions per unit of \$0.0700 for record date of June 30, 2022 with payment date of July 8, 2022.

Investment Performance

For the six-month period ended June 30, 2022, the First Trust ETF returned -35.66% compared to the S&P 500® Index (the “benchmark”) return of -18.26%. Unlike the benchmark, the First Trust ETF's return is net of fees and expenses.

The First Trust ETF's only holding, the Underlying Fund, held 70 equity securities as of June 30, 2022. The top ten equity holdings for the Underlying Fund accounted for 34.99% of the portfolio within the Underlying Fund.

The Underlying Fund underperformed the benchmark during the period due to both stock and allocation decisions within Information Technology. Information Technology struggled during the period as negative macroeconomic sentiment from rising interest rates, persistent inflation, and the war in Ukraine compressed profit margins and soured the near-term growth outlook for the sector. The underperformance was mitigated by both stock selection and an underweight allocation within Communication Services and Consumer Discretionary.

The Underlying Fund's top five stocks by contribution to return were Anaplan, Inc., International Business Machines Corporation, Citrix Systems, Inc., HashiCorp, Inc., and Mimecast Limited. The bottom five stocks by contribution to return were Kingsoft Cloud Holdings Limited, Rackspace Technology, Inc., MongoDB, Inc., Shopify Inc., and Cloudflare, Inc.

Recent Developments

As computer networks continue to mature and new communication technology transforms how the internet can be utilized, “The Cloud” has emerged as a highly efficient highly scalable set of hardware and software services. Largely, until the 1990's, network speeds were not sufficient to support remote compute and most all software and programs were run on local devices. As better communication technology has allowed for faster interactions between devices and networks, the cloud has emerged as a preferred format for utilizing hardware and software services, servers, storage, networks, applications and more. A key feature for cloud services is scalability, the ability to ramp

up workloads and storage immediately. The advent of cloud-based solutions has led to a rapid emergence of new software, infrastructure, and cloud platform companies. These businesses are exemplified by rapid scalability and 'as-a-service' models. The benefits of cloud-based offerings include low-cost, rapid scalability, reliability, and more secure IT environments. Cloud computing focused companies are well positioned to benefit from the associated changes in IT spending. According to Gartner, through 2020 only 33% of IT spending is currently in cloud segments, but this will grow to 45% in 2024. The recent drop in valuations reflects a change in investor sentiment which has gone from favoring growth at any cost to growth funded from organically generated cash flows. As capital markets tighten, largely a result of the Federal Reserve responding to high rates of inflation, the ability of companies to grow through raising capital will be challenged and companies with cash flows and current profits may be able to invest profitably through the full economic cycle. Trends to look out for continue to be the introduction of Web 3.0, a more open and decentralized cloud internet, and ongoing debates over privacy and data collection.

(1) This information is provided as at June 30, 2022 and December 31 of the years shown and is prepared under IFRS.

(2) Net asset value and distributions are based on the actual number of units outstanding at the relevant time. The increase/decrease from operations is based on the weighted average number of units outstanding over the period/year.

(3) Distributions were paid in cash or reinvested in additional units of the First Trust ETF, or both. Non-cash distributions are reinvested in additional units of the First Trust ETF and subsequently consolidated. Neither the number of units held by the unitholder, nor the net asset per unit of the First Trust ETF change as a result of any non-cash distributions.

(4) This table is not intended to be a reconciliation of beginning to ending net asset value per unit.

(a) Effective February 17, 2021, the First Trust ETF is fully invested in the Underlying Fund.

(1) Management expense ratio is based on total expenses (excluding commissions and other portfolio transaction costs) for the stated period/year, including the First Trust ETF's proportionate share of the MER of the Underlying Fund in which the First Trust ETF has invested, and is expressed as an annualized percentage of daily average net asset value during the period/year.

(2) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net asset value during the period/year. This includes the First Trust ETF's proportionate share of the commissions of Underlying Fund in which the First Trust ETF has invested.

(3) The First Trust ETF's portfolio turnover rate indicates how actively the First Trust ETF's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the First Trust ETF buying and selling all of the securities in its portfolio once in the course of the period/year. The higher a First Trust ETF's portfolio turnover rate in a period/year, the greater the trading cost payable by the First Trust ETF in the period/year, and the greater the chance of an investor receiving taxable capital gains in the period/year. There is not necessarily a relationship between high turnover rate and the performance of a First Trust ETF.

Management Fees

The First Trust ETF will pay the Manager a management fee of 0.15% based on the average daily NAV of the First Trust ETF. The management fee, plus applicable taxes including HST, will be accrued daily and paid monthly in arrears. The Manager may, from time to time in its discretion, waive all or a portion of the management fee charged at any given time.

The First Trust ETF will bear the Underlying Fund's management fee of 0.60% per annum on average daily net assets on the First Trust ETF's portfolio assets invested in the Underlying Fund. Accordingly, the management fee cost to unitholders of their investment will be 0.75% per annum of NAV of the First Trust ETF plus applicable taxes.

Past Performance

General

The past performance information shown assumes that all distributions made by the First Trust ETF in the period/years shown were reinvested in additional securities of the First Trust ETF. The performance information does not take into account sales, redemption, distribution or other optional charges that would have reduced returns or performance. How the First Trust ETF has performed in the past does not necessarily indicate how it will perform in the future.
