There was \$134,940 Level 1 assets transferred to Level 3 for the period ended June 30, 2022 (December 31, 2021 - \$nil). All fair value measurements above are recurring. The reconciliation of investments measured at fair value using unobservable inputs (Level 3) is presented below.

| | June 30, 2022 | December 31, 2021 |
|--|---------------|-------------------|
| Beginning Balance | _ | _ |
| Purchases | 709 | - |
| Sales | (16,994) | - |
| Net Transfers | 134,940 | _ |
| Realized Gains (Losses) | (34,424) | - |
| Change in Unrealized Appreciation (Depreciation) | (83,565) | _ |
| Ending Balance | 666 | _ |

As at June 30, 2022, Level 3 investments were not significant to the First Trust ETF. Equity positions are classified as Level 1 when the security is actively traded, and a reliable price is observable. If equities do not trade frequently and observable prices are not available, fair value is determined using observable market data (e.g. transactions for similar securities of the same issuer) and the fair value is classified as Level 2, unless the determination of fair value requires significant unobservable data, in which case the measurement is classified as Level 3.

The Level 3 investment is valued using a broker quote received through a service provider which is indicative of fair value. The unobservable input used to value the security is the broker quote. The effect of a change in input by 5% increase/decrease will increase/decrease fair value by \$33 (December 31, 2021 – \$nil).

First Trust AlphaDEX[™] European Dividend Index ETF (CAD-Hedged) Notes to Financial Statements - Specific Information For the period ended June 30, 2022 (unaudited)

A. INVESTMENT OBJECTIVE (NOTE 1) – First Trust AlphaDEX™ European Dividend Index ETF (CAD-Hedged) (the "First Trust ETF") seeks to replicate, to the extent possible, the performance of the AlphaDEX™ European Dividend Index (the "Index"), net of expenses. The Index results from applying the AlphaDEX™ methodology to a universe of ADRs of European companies that are listed on the NYSE, NYSE Market and NASDAQ exchanges. The investment strategy of the First Trust ETF is to invest in and hold a proportionate share of the constituent securities of the Index, or other securities, to seek to replicate the performance of the Index. The First Trust ETF may also hold cash and cash equivalents or other money market instruments to fund current liabilities. The First Trust ETF will generally seek to hedge substantially all of its U.S. dollar, British pounds sterling, euros and Swiss francs currency exposure associated with its portfolio investments back to the Canadian dollar.

B. FAIR VALUE MEASUREMENT (NOTE 5) - The following fair value hierarchy tables present information about the First Trust ETF assets measured at fair value on a recurring basis for the period ended June 30, 2022 and year ended December 31, 2021:

| | Fi | Financial Assets (Liabilities) at Fair Value (\$) As at June 30, 2022 | | | | |
|------------------------|---|---|---------|-----------|--|--|

| Total | 6,436,274 | (94,581) | - | 6,341,693 | | |

There was \$115,105 Level 1 assets transferred to Level 3 for the period ended June 30, 2022 (December 31, 2021 - \$Nil). All fair value measurements above are recurring. The reconciliation of investments measured at fair value using unobservable inputs (Level 3) is presented below.

| | June 30, 2022 | December 31, 2021 |
|--|---------------|-------------------|
| Beginning Balance | _ | _ |
| Purchases | _ | - |
| Sales | (20,964) | _ |
| Net Transfers | 115,105 | _ |
| Realized Gains (Losses) | (2,021) | - |
| Change in Unrealized Appreciation (Depreciation) | (90,464) | _ |
| Ending Balance | 1,656 | _ |

As at June 30, 2022, Level 3 investments were not significant to the First Trust ETF. Equity positions are classified as Level 1 when the security is actively traded, and a reliable price is observable. If equities do not trade frequently and observable prices are not available, fair value is determined using observable market data (e.g. transactions for similar securities of the same issuer) and the fair value is classified as Level 2, unless the determination of fair value requires significant unobservable data, in which case the measurement is classified as Level 3.

The Level 3 investment is valued using a broker quote received through a service provider which is indicative of fair value. The unobservable input used to value the security is the broker quote. The effect of a change in input by 5% increase/decrease will increase/decrease fair value by \$83 (December 31, 2021 – \$Nil).

A. INVESTMENT OBJECTIVE (NOTE 1) – First Trust AlphaDEX™ U.S. Health Care Sector Index ETF (the "First Trust ETF") seeks to replicate, to the extent possible, the performance of the StrataQuant® Health Care Index ("Index"), net of expenses. The investment strategy of the First Trust ETF is to invest in and hold the constituent securities of the applicable Index in the same proportion as they are reflected in the Index or securities intended to replicate the performance of such Index. The Index results from applying the AlphaDEX™ methodology to the Russell 1000® Index, a market index representing the large capitalization segment of the U.S. equity universe, and then selecting the constituent securities for the Index from those qualifying stocks included in the Health Care Sector.

A. INVESTMENT OBJECTIVE (NOTE 1) – First Trust AlphaDEX™ U.S. Industrials Sector Index ETF (the "First Trust ETF") seeks to replicate, to the extent possible, the performance of the StrataQuant® Industrials Index ("Index"), net of expenses. The investment strategy of the First Trust ETF is to invest in and hold the constituent securities of the applicable Index in the same proportion as they are reflected in the Index or securities intended to replicate the performance of such Index. The Index results from applying the AlphaDEX™ methodology to the Russell 1000® Index, a market index representing the large capitalization segment of the U.S. equity universe, and then selecting the constituent securities for the Index from those qualifying stocks included in the Industrials/Producer Durables Sector.

A. INVESTMENT OBJECTIVE (NOTE 1) – First Trust AlphaDEX™ U.S. Technology Sector Index ETF (the "First Trust ETF") seeks to replicate, to the extent possible, the performance of the StrataQuant® Technology Index ("Index"), net of expenses. The investment strategy of the First Trust ETF is to invest in and hold the constituent securities of the applicable Index in the same proportion as they are reflected in the Index or securities intended to replicate the performance of such Index. The Index results from applying the AlphaDEX™ methodology to the Russell 1000® Index, a market index representing the large capitalization segment of the U.S. equity universe, and then selecting the constituent securities for the Index from those qualifying stocks included in the Technology Sector.

D. MANAGEMENT FEES AND EXPENSES (NOTE 7) - Below is the current annual management fee charged to the First Trust ETF:

| Annual Manageme | nt Fee ¹ |
|-----------------|---------------------|
| | Units |
| | 0.60% |

¹ The Manager has agreed to waive a portion of the management fee equal to 0.10% of average daily net assets of the First Trust ETF until December 31, 2022 in response to the current low interest rate environment. The Manager anticipates that if the trailing average 30-day yield of the current 10-year Canadian Treasury Bond exceeds 3.50% before December 31, 2022, the fee waiver may not be continued past December 31, 2022. Given that the 0.10% waiver is on an annualized basis, if the waiver is for less than a year, the net management fee will be higher than 0.60%. Following December 31, 2022, the Manager may waive a portion of the management fee at any time in its discretion.

2. BASIS OF PRESENTATION

The information provided in these financial statements and notes thereto is as at June 30, 2022 with comparatives as at December 31, 2021 and for the period ended June 30, 2022 with comparatives for the period ended June 30, 2021.

These interim financial statements have been prepared in accordance with International Financial Reporting Standards ("IFRS") issued by the International Accounting Standards Board ("IASB").

The financial statements have been prepared on the historical cost basis, except for the revaluation of certain financial instruments. Historical cost is generally based on the fair value of the consideration given in exchange for assets.

3. SIGNIFICANT ACCOUNTING POLICIES

The accounting policies set out below have been applied consistently to all periods presented in these financial statements.

Financial instruments

(i) Classification

Financial Assets

A First Trust ETF classifies its investments in debt and equity securities and open-ended investment funds based on its business model for managing those financial assets and the contractual cash flow characteristics of the financial assets.

These financial assets are managed and their performance is evaluated on a fair value basis. A First Trust ETF also manages these financial assets with the objective of realizing cash flows through sales. A First Trust ETF has not taken the option to irrevocably designate any of its debt and equity securities at fair value through other comprehensive income ("FVOCI"). Consequently, these financial assets are mandatorily measured at FVTPL.

Financial Liabilities

A First Trust ETF makes short sales in which a borrowed security is sold in anticipation of a future decline in its market value or used as an arbitrage strategy.

Financial assets or financial liabilities held for trading are those acquired or incurred principally for the purpose of selling or repurchasing in the near future or on initial recognition are a part of a portfolio of identified financial instruments that a First Trust ETF manages together and have recent actual pattern of short term profittaking. All derivatives and short positions are included in this category and mandatorily measured at FVTPL.

Hedge Accounting

A First Trust ETF does not apply hedge accounting to any of its derivative positions.

(ii) Financial assets and financial liabilities at amortized cost

The financial assets and liabilities measured at amortized cost include cash collateral posted on derivative positions, accrued income, due to and from brokers and other short-term receivables and payables.

At each reporting date, a First Trust ETF measures the loss allowance on cash collateral held, amounts due from broker, accrued income and other short term receivables at an amount equal to the lifetime expected credit losses if the credit risk has increased significantly initial recognition. If, at the reporting date, the credit risk has not increased significantly since initial recognition, a First Trust ETF measures the loss allowance at an amount equal to the 12 month expected credit losses. Given the short-term nature of the receivables and the high credit quality, a First Trust ETF has determined that the expected credit loss allowances are not material.

(iii) Recognition and measurement

Financial assets and financial liabilities at FVTPL are initially recognized on the trade date, which is the date on which the First Trust ETFs become a party to the contractual provisions of the instrument. Other financial assets and financial liabilities are recognized on the date on which they are originated.

Financial assets and financial liabilities at FVTPL are initially recognized at fair value, with transaction costs recognized in the statement of comprehensive income. Financial assets or financial liabilities not at FVTPL are initially recognized at fair value plus transaction costs that are directly attributable to their acquisition or issue.

Subsequent to initial recognition, financial assets and liabilities at FVTPL are measured at fair value.

Net realized gain (loss) on sale of investments and net change in unrealized appreciation (depreciation) of investments arising from changes in their fair value are included in the statement of comprehensive income for the period in which they arise.

Dividend or interest earned on financial assets at fair value through profit or loss and dividend or interest expense on the financial liabilities at fair value through profit or loss are disclosed in a separate line item in the statement of comprehensive income.

Fair value is determined in the manner described in item (v) below.

(iv) Derecognition

Financial assets are derecognized when the rights to receive cash flows from the investments have expired or the First Trust ETF has transferred substantially all risks and rewards of ownership.

Financial liabilities at FVTPL are derecognized when the obligation specified in the contract is discharged, cancelled, or expired.

Net realized gain (loss) on sale of investments and derivatives are determined on a weighted average cost basis.

(v) Fair value measurement

For the First Trust ETFs, investments in listed securities are measured at fair value, which is determined in reference to their quoted close prices on the principal securities exchange on which the issue is traded. The change in the difference between the fair value and average cost is included in the statement of comprehensive income as unrealized appreciation (depreciation) on investments.

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value of financial assets and liabilities traded in active markets (such as publicly traded derivatives and trading securities) are based on quoted market prices at the close of trading on the reporting date. In circumstances where the last traded price is not within the bid-ask spread, management will determine the point within the bid-ask spread that is most representative of fair value.

Forward foreign exchange contracts are valued at the current market value thereof on the valuation date. The value of these forward contracts is the gain or loss that would be realized if, on the valuation date, the positions were to be closed out.

A financial instrument is regarded as quoted in an active market if quoted prices are readily and regularly available from an exchange, dealer, broker, industry group, pricing service, or regulatory agency, and those prices represent actual and regularly occurring market transactions on an arm's length basis.

The fair value of financial assets and liabilities that are not traded in an active market is determined by using valuation techniques. A First Trust ETF uses a variety of methods and makes assumptions that are based on market conditions existing at each year-end date. Valuation techniques used for non-standardized financial instruments such as options, currency swaps and other over-the-counter derivatives, include the use of comparable recent arm's length transactions, reference to other instruments that are substantially the

same, discounted cash flow analysis, option pricing models and other valuation techniques commonly used by market participants making the maximum use of market inputs and relying as little as possible on entityspecific inputs.

For instruments for which there is no active market, the First Trust ETF may use internally developed models, which are usually based on valuation methods and techniques generally recognized as standard within the industry. Valuation models are used primarily to value unlisted equity and debt securities for which markets were or have been inactive during the financial year. Some of the inputs to these models may not be market observable and are therefore estimated based on assumptions.

The output of a model is always an estimate or approximation of a value that cannot be determined with certainty, and valuation techniques employed may not fully reflect all factors relevant to the positions the First Trust ETF holds. Valuations are therefore adjusted, where appropriate, to allow for additional factors including model risk, liquidity risk and counterpart risk.

IFRS 13 requires disclosures relating to fair value measurements using a three-level fair value hierarchy. The level within which the fair value measurement is categorized in its entirety is determined on the basis of the lowest level input that is significant to the fair value measurement. Assessing the significance of a particular input requires judgment, considering factors specific to the asset or liability. The following shows financial instruments recognized at fair value, categorized between those whose fair value is based on:

- Level 1 Quoted prices (unadjusted) in active markets for identical assets or liabilities that the entity can access at the measurement date.
- Level 2 Valuation techniques for which the lowest level input that is significant to the fair value measurement is directly or indirectly observable.
- Level 3 Valuation techniques for which the lowest level input that is significant to the fair value measurement is unobservable.

The determination of what constitutes "observable" requires significant judgment by the First Trust ETF. The First Trust ETF considers observable data to be that market data that is readily available, regularly distributed or updated, reliable and verifiable, not proprietary, and provided by independent sources that are actively involved in the relevant market.

Unobservable inputs are used to measure fair value to the extent that relevant observable inputs are not available, thereby allowing for situations in which there is little, if any, market activity for the asset or liability at the measurement date. However, the fair value measurement objective remains the same, i.e., an exit price at the measurement date from the perspective of a market participant that holds the asset or owes the liability. Therefore, unobservable inputs reflect the assumptions that market participants would use when pricing the asset or liability, including assumptions about risk.

Fair values are classified as Level 1 when the related security or derivative is actively traded and a quoted price is available. If an instrument classified as Level 1 subsequently ceases to be actively traded, it is transferred out of Level 1. In such cases, instruments are reclassified into Level 2, unless the measurement of its fair value requires the use of significant unobservable inputs, in which case it is classified as Level 3.

For assets and liabilities that are recognized in the financial statements on a recurring basis, the First Trust ETFs determine whether transfers have occurred between levels in the hierarchy by re-assessing the categorization (based on the lowest level input that is significant to the fair value measurement as a whole) at the end of each reporting period.

The carrying values of cash, other assets, other liabilities and the First Trust ETFs' obligation for net assets attributable to holders of redeemable units approximate their fair values due to their short-term nature.

See Note 5 for additional details related to the First Trust ETFs' fair value measurements.

Cash

Cash consists of cash on deposit and bank overdraft.

Receivable for portfolio securities sold and Payable for portfolio securities purchased

Receivable for portfolio securities sold and Payable for portfolio securities purchased are recorded on the statement of financial position at the amount to be received or delivered.

These classes of redeemable units are the most subordinate classes of financial instruments in First Trust ETFs and rank pari passu in all material respects and have the same terms and conditions other than differences in management fee rate where the Advisor Class pays additional amount for service fees (See note 7 – Management Fees and Expenses).

A separate net asset value is calculated for each class of Common Class, Advisor Class, Units, Hedged Units (collectively called "Units") of the First Trust ETFs. The net asset value of a particular class of unit is computed by calculating the value of the class' proportionate share of the assets and liabilities of the First Trust ETF common to all series less direct expenses attributable only to that class. The net asset value is divided by the number of units outstanding for each class on the day of valuation to compute net asset value per unit. Other expenses are allocated proportionately to each series based upon the relative net asset value of each class. Expenses are accrued daily.

As of February 28, 2022, the First Trust ETFs no longer are offering Advisor Class units for certain First Trust ETFs which previously offered such units. The Manager successfully redesignated Advisor Class units to Common units providing unitholders with a lower cost solution going forward.

Dividends are distributed according to the dividend policy discussed in the respective simplified prospectuses of the First Trust ETFs. Income not distributed is included in net assets attributable to holders of redeemable shares.

Investment income

The "Interest income for distribution purposes" shown on the statement of comprehensive income represents the coupon interest received by the First Trust ETFs accounted for on a straight-line basis. The First Trust ETFs do not amortize premiums paid or discounts received on the purchase of fixed income securities except for zero coupon bonds which are amortized on a straight-line basis.

Dividend income is recognized on the ex-dividend date in the statement of comprehensive income within dividend income, gross of withholding taxes, when the First Trust ETF's right to receive payments is established.

The First Trust ETFs generally incur withholding taxes imposed by certain countries on investment income and capital gains. Such income and gains are recorded on a gross basis and the related withholding taxes are shown as a separate expense in the statement of comprehensive income.

Foreign currencies

The primary economic environment in which an entity operates is normally the one in which it primarily generates and expends cash. The Manager considers the currency of the primary economic environment in which the First Trust ETFs operate to be the Canadian dollar as this is the currency which, in the Manager's opinion, most faithfully represents the economic effects of underlying transactions, events and conditions. Furthermore, the Canadian dollar is the currency in which the First Trust ETFs measure their performance and also issue and redeem redeemable shares. Canadian dollar is the functional currency of the First Trust ETFs.

Investments purchased or sold in foreign currencies are translated into Canadian dollars using the exchange rate prevailing on the trade date. Income on foreign investments is recorded at gross, withholding taxes are shown separately as a line item, and are translated at the rate of exchange on the dates of such transactions. The fair values of investments and other assets and liabilities in foreign currencies are translated at the period-end exchange rates.

Increase (decrease) in net assets attributable to holders of redeemable units per unit

Increase (decrease) in net assets from operations per unit represents the increase (decrease) in net assets from operations by class divided by the average units outstanding per class during the period.

Transaction costs

Transaction costs, such as brokerage commissions, incurred in the purchase and sale of securities are presented as a separate line item in the statement of comprehensive income in the period incurred.

Forward foreign exchange currency agreements

Some of the First Trust ETFs may purchase forward foreign exchange currency agreements to hedge assets and liabilities denominated in foreign currencies.

The value of the forward foreign exchange currency agreements is the gain or loss that would be realized if, on the valuation date, the position in the forward contract was closed out in accordance with its terms. The unrealized gains or losses on the forward contract are reported as part of the net change in unrealized appreciation or depreciation of derivatives in the statement of comprehensive income until it is closed out or partially settled.

Valuations of derivative instruments are carried out daily, using normal exchange reporting sources for exchange-traded derivatives and specific broker enquiry for over-the-counter derivatives.

Upon the closing out of the instrument, any gain or loss on forward foreign exchange currency agreements is disclosed in the statement of comprehensive income as net realized (loss) gain on foreign exchange.

Forward contracts entered into by the First Trust ETFs represent a firm commitment to buy or sell an underlying asset, or currency at a specified value and point in time based upon an agreed or contracted quantity.

Offsetting financial instruments

Financial assets and liabilities are offset and the net amount reported in the statement of financial position where the First Trust ETF currently has a legally enforceable right to set-off the recognized amounts and there is an intention to settle on a net basis or realize the asset and settle the liability simultaneously.

Critical accounting estimates and assumptions

The preparation of financial statements requires management to use judgment in applying its accounting policies and to make estimates and assumptions about the future. The following discusses the most significant accounting judgments and estimates that the Manager has made in preparing these financial statements. Actual results may differ from these estimates.

Fair value of securities not quoted in an active market

The fair value of such securities not quoted in an active market may be determined by the First Trust ETFs using reputable pricing sources (such as pricing agencies) or indicative prices from bond/debt market makers. The First Trust ETF would exercise judgment and estimates on the quantity and quality of pricing sources used. Where no market data is available, the First Trust ETF may value positions using its own models, which are usually based on valuation methods and techniques generally recognized as standard within the industry. Models use observable data, to the extent practicable. However, areas such as credit risk (both own and counterparty), volatilities and correlations require management to make estimates. Changes in assumptions about these factors could affect the reported fair value of financial instruments.

The determination of what constitutes 'observable' requires significant judgment by the Manager. The Manager considers observable data to be market data that is readily available, regularly distributed or updated, reliable and verifiable, not proprietary, and provided by independent sources that are actively involved in the relevant market. Refer to Note 5 for further information about the fair value measurement of the First Trust ETFs' financial instruments.

FLEX Options

FLEX Options are customized equity or index option contracts that trade on an exchange, but provide investors with the ability to customize key contract terms like exercise prices, styles and expiration dates. FLEX Options are guaranteed for settlement by the Options Clearing Corporation ("OCC").

Each Target Outcome Fund will purchase and sell call and put FLEX Options based on the performance of the Underlying ETF. The FLEX Options that each Target Outcome Fund will hold that reference the Underlying ETF will give each Target Outcome Fund the right to receive or deliver shares of the Underlying ETF on the option expiration date at a strike price, depending on whether the option is a put or call option and whether each Target Outcome Fund purchases or sells the option. The FLEX Options held by each Target Outcome Fund are European style options, which are exercisable at the strike price only on the FLEX Option expiration date.

4. FORWARD FOREIGN EXCHANGE CURRENCY AGREEMENTS

Certain First Trust ETFs may enter into forward foreign exchange currency agreements to minimize the impact of changes in the Canadian-U.S. foreign exchange rate or Canadian-CHF/EUR/GBP foreign exchange rates on the First Trust ETFs' net asset value. The typical duration for a forward contract is one month but some contracts may be for longer periods up to six months. Bank of New York Mellon is the counterparty to all forward contracts of the First Trust ETFs except for FSL for which Canadian Imperial Bank of Commerce is the counterparty.

The forward foreign exchange currency agreements, as applicable, are shown in the Notes to Financial Statements - Specific Information under Schedule of Portfolio Investments for each First Trust ETF.

5. FAIR VALUE MEASUREMENT

Valuation techniques and inputs used for the fair value measurements categorized within Level 2 of the fair value hierarchy is given below:

Forward foreign exchange currency contracts

The value of the forward foreign exchange currency agreements is the gain or loss that would be realized if, on the valuation date, the position in the forward contract was closed out in accordance with its terms. The most significant observable input is the forward foreign currency exchange rate.

Options

Options are classified as level 1 when they are exchange traded and prices are readily available on the market. When the options do not trade and prices are not readily available, they are priced by a third-party pricing service that uses an options pricing model to price the options. The option pricing model utilizes, as inputs, observable traded prices of other options with similar or nearby strike prices and expiration dates. Since the inputs to the option pricing model are observable, the options are classified into level 2. FLEX Options are normally valued using a model-based price provided by a third-party pricing vendor. On days when a trade in a FLEX Option occurs, the trade price will be used to value such FLEX Options in lieu of the model price.

The fair value hierarchy classifications of assets and liabilities are discussed in the Notes to Financial Statements - Specific Information for each First Trust ETF, where applicable.

6. REDEEMABLE UNITS

Common Class, Advisor Class, Units, Hedged Units (collectively called "Units") of each of the First Trust ETFs are being issued and sold on a continuous basis and there is no maximum number of units that may be issued. The Units of the First Trust ETFs are Canadian dollar denominated. The First Trust ETFs are listed on the TSX except FJFB and FJFG are listed on the NEO Exchange (the "NEO") and an investor is able to buy or sell Units of the First Trust ETFs on the TSX or NEO through registered brokers and dealers in the province or territory where the investor resides. Investors may incur customary brokerage commissions in buying or selling Units. Refer to the table of the First Trust ETFs found in Note 3: Significant Accounting Policies under Net assets attributable to holders of redeemable units per unit.

As of February 28, 2022, the First Trust ETFs no longer are offering Advisor Class units for certain First Trust ETFs which previously offered such units. The Manager successfully redesignated Advisor Class units to Common units providing unitholders with a lower cost solution going forward.

Investors that redeem Units prior to the distribution record date for any distribution will not be entitled to receive that distribution.

7. MANAGEMENT FEES AND EXPENSES

Each First Trust ETF will pay the Manager a management fee and, in respect of the Advisor Class, an additional amount for a service fee based on the average daily net asset value ("NAV") of the applicable First Trust ETF.

The management fee, plus applicable taxes, including HST, are accrued daily and paid monthly in arrears. The Manager may, from time to time in its discretion, waive all or a portion of the management fee charged at any given time.

Advisor Class Service Fee: The Manager pays to registered dealers a service fee equal to 1.00% per annum of the NAV of the Advisor Class in respect of all First Trust ETFs, other than ETP, FSL, and 0.50% per annum of the NAV of the Advisor Class in respect of ETP, FSL, for each Advisor Class unit held by clients of the registered dealer, plus any applicable taxes. The service fee will be calculated and accrued daily and paid quarterly at the end of each calendar quarter.

As of February 28, 2022, the First Trust ETFs no longer are offering Advisor Class units for certain First Trust ETFs which previously offered such units. The Manager successfully redesignated Advisor Class units to Common units providing unitholders with a lower cost solution going forward.

In addition to the payment of the management fee, each First Trust ETF is responsible for the costs and expenses incurred in complying with National Instrument 81-107, Independent Review Committee for Investment Funds (including any expenses related to the implementation and on-going operation of an independent review committee), brokerage expenses and commissions, income and withholding taxes as well as all other applicable taxes, including HST, the costs of complying with any new governmental or regulatory requirement introduced after the First Trust ETFs were established and extraordinary expenses and, in the discretion of the Manager, any costs associated with the printing and distribution of any documents that the securities regulatory authorities require be sent or delivered to investors in the First Trust ETF. The Manager is responsible for all other costs and expenses of the First Trust ETFs, including fees payable to the Portfolio Advisor, Custodian, Valuation Agent, Registrar and Transfer Agent and Plan Agent and fees payable to other service providers retained by the Manager.

The management fees charged are discussed in the Notes to Financial Statements - Specific Information for each First Trust ETF.

8. TAXATION

Income taxes

The First Trust ETFs are trusts and registered investments under Provisions of the Income Tax Act (Canada) (the "Tax Act") and are expected to meet the requirements to be mutual fund trusts under the provisions of the Tax Act. The First Trust ETFs will generally not be subject to tax under Part I of the Act in respect of its net income or net realized capital gain in each taxation year to the extent that such net income and net realized capital gain are paid or payable in the year to the unitholders.

Distributions

Cash distributions on Units of a First Trust ETF are paid primarily out of dividends or distributions and other income or gains received by the First Trust ETF less the expenses of the First Trust ETF but may also consist of non-taxable amounts including return of capital, which may be paid in the Manager's sole discretion. To the extent that the expenses of a First Trust ETF exceed the income generated by such First Trust ETF in any given month, quarter or year, as the case may be, it is not expected that a monthly distribution will be paid. As a result of the higher management fees on the Advisor Class, any such cash distributions on the Advisor Class are expected to be less than the distributions payable on the Common Class. Non-cash distributions are reinvested back to the First Trust ETFs.

As of February 28, 2022, the First Trust ETFs no longer are offering Advisor Class units for certain First Trust ETFs which previously offered such units. The Manager successfully redesignated Advisor Class units to Common units providing unitholders with a lower cost solution going forward.

Distributions of sufficient net realized capital gains (reduced by loss carryforwards, if any) are made, on record date, after December 15 but on or before December 31 to ensure that the First Trust ETF will not be liable for income taxes.

Tax loss carryforwards

The non-capital losses for income tax purposes may be carried forward for 20 years. The net capital losses for income tax purposes may be carried forward indefinitely and applied against capital gains realized in future years.

The net capital losses and non-capital losses, as applicable, are discussed in the Notes to Financial Statements - Specific Information for each First Trust ETF.

9. COMMISSIONS

Total commissions and other transaction costs paid or payable to dealers by the First Trust ETFs for their portfolio transactions, where applicable, are discussed in the Specific Information for each First Trust ETF.

10. RELATED PARTY INFORMATION

The Manager is responsible for the management and administration of the First Trust ETFs. In consideration for the services provided by the Manager, the First Trust ETFs pay management fees (see note 7 – Management Fees and Expenses).

The total management fees earned by the Manager including amounts owing where applicable, are discussed in the Notes to Financial Statements - Specific Information for each First Trust ETF.

11. FINANCIAL RISK MANAGEMENT

The First Trust ETFs are exposed to a number of risks due to the nature of their activities and as further set out in their prospectus. These risks include market risk (including currency risk, interest rate risk and price risk), credit risk and liquidity risk. The First Trust ETFs' objective in managing these risks is the protection and enhancement of share value.

The financial risk management (market risk, interest rate risk, credit risk, currency risk, liquidity risk, and concentration risk) as applicable, are discussed in the Notes to Financial Statements - Specific Information for each First Trust ETF.

Market risk

Market risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. The investments of the First Trust ETFs are subject to normal market fluctuations and the risks inherent in investment in financial markets. The maximum risk resulting from financial instruments held by the First Trust ETFs is determined by the fair value of the financial instruments. The Portfolio Advisor moderates this risk through a careful selection of securities within specified limits and the First Trust ETFs' market price risk is moderated through diversification of the investment portfolio. The Portfolio Advisor monitors the First Trust ETFs' overall market positions on a daily basis and positions are maintained within established ranges.

Some First Trust ETFs hold Underlying ETFs and Underlying Funds. Thus, they are indirectly exposed to the market risk through the investments held by the Underlying ETFs and Underlying Funds in their investment portfolio.

For the period ending June 30, 2022 and year ended December 31, 2021, the overall market exposures relate to the First Trust ETFs' investments in securities.

Interest rate risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates.

Certain First Trust ETFs are exposed to interest rate risk as they invest in listed debt securities bearing interest at fixed and floating interest rates. Other financial assets and liabilities exposed to interest rate risk include borrowings which are invested at long term interest rates and cash and bank balances which are invested at short term interest rates. The Portfolio Advisors manage the First Trust ETFs' exposure to interest rate risk on a daily basis in accordance with the First Trust ETFs' investment objectives and policies. The First Trust ETFs' overall exposure to interest rate risk is monitored closely by the Portfolio Advisors.

Interest rate risk arises on interest-bearing financial instruments. The majority of the First Trust ETFs', except FJFB, FTB, ETP, and FSL, financial assets and liabilities are non-interest bearing. As a result, the majority of the First Trust ETFs are not subject to significant amounts of interest rate risks due to fluctuations in the prevailing level of market interest rates.

FJFB invests in interest-bearing securities. FTB and ETP hold various exchange traded funds (the "Underlying ETFs"), that invest in interest bearing securities, some of which are fixed rate. FSL obtains exposure to a portfolio of senior floating rate loans and debt securities by holding securities of the Underlying Fund. The income of these First Trust ETFs may be affected by changes in interest rates relevant to particular securities or as a result of the Portfolio Advisor being unable to secure similar returns on the expiry or sale of securities. In addition, the price of interest-bearing securities will also fluctuate with interest rate changes. As a result, the price of the Underlying ETFs and Underlying Fund may fluctuate due to changes in the prevailing levels of market interest rates.

ETP and FTB hold Underlying ETFs and FSL holds Underlying Fund. There is no look-through of the interest rate risks. Thus, they are indirectly exposed to the interest rate risk through the investments held by the Underlying ETFs and Underlying Fund in their investment portfolio.

As noted above, the fair value of the senior loans have very little interest rate sensitivity due to their floating interest rate. High yield bonds, by contrast, typically have a fixed interest rate and are subject to greater interest rate sensitivity.

Credit risk

Credit risk is the risk that a counterparty to a financial instrument will cause a loss by failing to discharge its obligations. The First Trust ETFs are exposed to credit risk on its debt instruments, derivative assets, cash and cash equivalents and other short-term trade receivables.

The First Trust ETFs, except FTB, ETP, FJFB, and FSL had no significant investments in debt instruments and/or derivatives as of June 30, 2022 and December 31, 2021, as applicable.

ETP, FTB, and FSL - The greatest indirect concentration of credit risk is in debt securities, such as bonds, held by Underlying ETFs and Underlying Fund. The fair value of debt securities includes consideration of the credit worthiness of the debt issuer. For more information regarding the credit risk, refer to the Underlying ETFs' financial statements available on the SEDAR website at www.sedar.com and to the Underlying Fund's financial statements available on the First Trust website at www.ftportfolios.com.

ETP and FTB hold Underlying ETFs and FSL holds Underlying Fund. There is no look-through of the financial risks. Thus, they are indirectly exposed to the credit risk through the investments held by the Underlying ETFs and the Underlying Fund in their investment portfolio.

Currency risk

Many of the First Trust ETFs hold assets and liabilities, including cash, short-term investments, equities, fixed income instruments and currency-based derivative contracts that are denominated in foreign currencies. These First Trust ETFs are therefore exposed to currency risk, as the value of the securities denominated in another currency fluctuates due to changes in exchange rates.

Although some First Trust ETFs have inherent currency risk, the currency risk will typically be hedged by entering into foreign currency forward contracts if required, however some moderate currency exposure may be assumed if deemed to be beneficial to the First Trust ETFs.

ETP and FTB hold Underlying ETFs and FSL, FDL, and the Sector and Industry Funds hold Underlying Funds. There is no look-through of the currency risks. Thus, they are indirectly exposed to the currency risk through the investments held by the Underlying ETFs and Underlying Funds in their investment portfolio.

ETP, FTB, FJFB, and FST are Canadian funds therefore they have insignificant currency risk as at June 30, 2022.

Liquidity risk

Liquidity risk is defined as the risk that the First Trust ETFs may not be able to settle or meet their obligation. The First Trust ETFs are exposed to daily cash redemptions of redeemable units. Therefore, the First Trust ETFs invest the majority of the assets in investments that are traded in the active market and can be readily disposed. In addition, the First Trust ETFs retain sufficient cash and cash equivalent positions to maintain liquidity.

Concentration Risk

Concentration risk indicates the relative sensitivity of the First Trust ETFs' performance to developments affecting a particular industry or geographical location. Concentration risk also arises when a number of financial instruments or contracts are entered into with the same counterparty, or where a number of counterparties are engaged in similar business activities, or activities in the same geographical region, or have similar economic features that would cause their ability to meet contractual obligations to be similarly affected by changes in economic, political or other conditions. The Portfolio Advisor monitors concentration risk through diversification and a thorough understanding of each investment in the portfolio.

Specific Risks associated with Target Outcome Funds

Buffered Loss Risk. There can be no guarantee that the First Trust ETF will be successful in its strategy to buffer against Underlying ETF losses if the fair value of the Underlying ETF decreases over the Target Outcome Period by 10% or less. A unitholder may lose their entire investment. The First Trust ETF's strategy seeks to deliver returns that match the Underlying ETF (up to the cap), while limiting downside losses, if units are bought on the day on which the First Trust ETF enters into the FLEX Options and held until those FLEX Options expire at the end of each Target Outcome Period. In the event an investor purchases units after the date on which the FLEX Options were entered into or sells units prior to the expiration of the FLEX Options, the buffer that the First Trust ETF seeks to provide may not be available.

Capped Upside Risk. The First Trust ETF's strategy seeks to provide returns that match those of the Underlying ETF for First Trust ETF units purchased on the first day of a Target Outcome Period and held for the entire Target Outcome Period, subject to a pre-determined upside cap. If an investor does not hold its First Trust ETF units for an entire Target Outcome Period, the returns realized by that investor may not match those the First Trust ETF seeks to achieve. If the Underlying ETF experiences gains during a Target Outcome Period, the First Trust ETF will not participate in those gains beyond the cap. In the event an investor purchases Fund units after the first day of a Target Outcome Period and the First Trust ETF has risen in value to a level near to the cap, there may be little or no ability for that investor to experience an investment gain on their First Trust ETF units.

FLEX Options Correlation Risk. The FLEX Options held by the First Trust ETF will be exercisable at the strike price only on their expiration date. Prior to the expiration date, the value of the FLEX Options will be determined based upon market quotations or using other recognized pricing methods. The value of the FLEX Options prior to the expiration date may vary because of related factors other than the value of the Underlying ETF. Factors that may influence the value of the FLEX Options, other than changes in the value of the Underlying ETF, may include interest rate changes, changing supply and demand, decreased liquidity of the FLEX Options and changing volatility levels of the Underlying ETF.

FLEX Options Liquidity Risk. The FLEX Options are listed on an exchange; however, no one can guarantee that a liquid secondary trading market will exist for the FLEX Options. In the event that trading in the FLEX Options is limited or absent, the value of the First Trust ETF's FLEX Options may decrease. In a less liquid market for the FLEX Options, liquidating the FLEX Options may require the payment of a premium (for written FLEX Options) or acceptance of a discounted price (for purchased FLEX Options) and may take longer to complete. A less liquid trading market may adversely impact the value of the FLEX Options and First Trust ETF units and result in the First Trust ETF being unable to achieve its investment objective. The trading in FLEX Options may be less deep and liquid than the market for certain other securities. FLEX Options may be less liquid than certain non-customized options. In a less liquid market for the FLEX Options, the liquidation of a large number of options may more significantly impact the price. A less liquid trading market may adversely impact the value of the FLEX Options and the value of the investor's investment.

FLEX Options Risk. The OCC may be unable or unwilling to perform its obligations under the FLEX Options contracts. Additionally, FLEX Options may be less liquid than other exchange-traded options. The value of the FLEX Options prior to their expiration date may vary because of factors other than fluctuations in the value of the Underlying ETF, such as an increase in interest rates, a change in the actual and perceived volatility of the stock market and the Underlying ETF and the remaining time to expiration. Additionally, the value of the FLEX Options

does not increase or decrease at the same rate as the Underlying ETF or its underlying securities. FLEX Option prices may be highly volatile and may fluctuate substantially during a short period of time. Trading FLEX Options involves risks different from, or possibly greater than, the risks associated with investing directly in securities.

FLEX Options Valuation Risk. The FLEX Options held by the First Trust ETF will be exercisable at the strike price only on their expiration date. Prior to the expiration date, the value of the FLEX Options will be determined based upon market quotations or using other recognized pricing methods. The value of the FLEX Options prior to the expiration date may vary because of related factors other than the value of the Underlying ETF. During periods of reduced market liquidity or in the absence of readily available market quotations for the holdings of the First Trust ETF, the ability of the First Trust ETF to value the FLEX Options becomes more difficult and the judgment of the First Trust ETF's Portfolio Advisor may play a greater role in the valuation of the First Trust ETF's holdings due to reduced availability of reliable objective pricing data.

Target Outcome Period Risk. The First Trust ETF's investment strategy is designed to deliver returns that match the Underlying ETF if First Trust ETF units are bought on the day on which the First Trust ETF enters into the FLEX Options (i.e., the first day of a Target Outcome Period) and held until those FLEX Options expire at the end of the Target Outcome Period. In the event an investor purchases First Trust ETF units after the first day of a Target Outcome Period or sells units prior to the expiration of the Target Outcome Period, the value of that investor's investment in First Trust ETF units may not be buffered against a decline in the value of the Underlying ETF and may not participate in a gain in the value of the Underlying ETF up to the cap for the investor's investment period.
