#### **Investment Objective and Strategy**

The fundamental investment objective of **First Trust Indxx Innovative Transaction and Process ETF** (the “First Trust ETF”) is to replicate, to the extent possible, the performance of an innovative transaction and process index. Currently, the First Trust ETF seeks to replicate, to the extent possible, the performance of the Indxx Blockchain Index (the “Index”), provided by Indxx, LLC, net of expenses.

The investment strategy of the First Trust ETF is to obtain exposure to the Index by holding shares of a U.S.-listed index ETF, the First Trust Indxx Innovative Transaction & Process ETF (“Underlying Fund”), which replicates or substantially replicates the performance of the Index by directly holding the Constituent Securities of the Index. The First Trust ETF may also hold cash and cash equivalents or other money market instruments to fund current liabilities. The Index seeks to track the performance of exchange-listed common shares (or corresponding ADRs or GDRs) of companies in various industries with their primary listing in developed or emerging market countries that are actively using, investing in, developing or have products that are poised to benefit from blockchain technology and/or the potential for increased efficiency that it provides to various business processes. The Index seeks to include only companies that have devoted material resources to the use of blockchain technologies. However, the Index may contain securities of issuers whose primary business operations are not blockchain related or do not include blockchain related activities.

#### **Risk**

The risks associated with an investment in the First Trust ETF remain as discussed in the First Trust ETF’s most recent prospectus. There have been no significant changes during the reporting period that affected the overall level of risk associated with the First Trust ETF.

#### **Results of Operations**

##### ***General***

The First Trust ETF’s net asset value as of June 30, 2022 was \$2,099,463 or \$22.10 per unit. The First Trust ETF’s net asset value as of December 31, 2021 was \$2,924,176 or \$27.85 per unit.

For the six-month period ended June 30, 2022, the First Trust ETF paid total cash distributions of \$0.3793. In addition, the First Trust ETF declared cash distributions per unit of \$0.1700 for record date of June 30, 2022 with payment date of July 8, 2022.

##### ***Investment Performance***

For the six-month period ended June 30, 2022, the First Trust ETF returned -19.52% compared to the S&P 500® Index (the “benchmark”) total return of -18.26%. Unlike the benchmark, the First Trust ETF’s return is net of fees and expenses.

The First Trust ETF’s only holding, the Underlying Fund, held 103 equity securities as of June 30, 2022. The top ten equity holdings for the Underlying Fund accounted for 15.78% of the portfolio within the Underlying Fund.

The Underlying Fund underperformed the benchmark during the period primarily due to stock selection and an overweight allocation to Information Technology. Information Technology struggled during the period due to an unfavorable macroeconomic environment led by rising interest rates and high inflation. As such, positions in big technology names like Wipro, PayPal, and Advanced Micro Devices hurt performance. An additional source of underperformance included the appreciation of the U.S Dollar. Currency effects contributed to the underperformance as the U.S. dollar appreciated significantly relative to leading global currencies during the period. The underperformance was mitigated by an overweight in Financials and underweight positions in Consumer Discretionary and Communication Services.

The Underlying Fund’s top five stocks by contribution to return were Mitsubishi UFJ Financial Group, Inc., AT&T Inc., Lockheed Martin Corporation, Deutsche Telekom AG, and BOC Hong Kong (Holdings) Limited. The bottom five

stocks by contribution to return were Public Joint Stock Company Gazprom, Sberbank of Russia, PayPal Holdings, Inc., Advanced Micro Devices, Inc., and NVIDIA Corporation.

#### **Recent Developments**

Since, early 2018, the First Trust ETF has given investors exposure to companies involved in the blockchain ecosystem, primarily in the Financials and Information Technology sectors. The first half of 2022 has seen a continuation of the downtrend in cryptocurrency prices that began in the fourth quarter of 2021. The so called "Crypto Winter" came with a wipeout of over \$2T of cryptocurrencies as several stablecoins such as TerraUSD imploded and vulnerable DeFi firms such as Celsius face bankruptcy. Cryptocurrencies are typically treated as risky assets and tend to experience deep selloffs along with high-multiple growth stocks. Non-fungible tokens (NFTs) have lost popularity as well, trade volumes in June were reported to be down 86% from their January 2022 highs as many enthusiasts have abandoned digital collectibles. Although retail interest in cryptocurrencies and NFTs has waned, enterprises continue to see potential for distributed ledger technology including use cases in smart contracts, digital personal identity, and supply chain logistics. In the event of a recession and crypto winter that eliminate companies and use cases that are least proven to add value, only the best capitalized, most resilient business models that adopt essential blockchain applications will emerge on the other side.

(1) Management expense ratio is based on total expenses (excluding commissions and other portfolio transaction costs) for the stated period/year, including the First Trust ETF's proportionate share of the MER of the Underlying Fund in which the First Trust ETF has invested, and is expressed as an annualized percentage of daily average net asset value during the period/year.

(2) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net asset value during the period/year. This includes the First Trust ETF's proportionate share of the commissions of Underlying Fund in which the First Trust ETF has invested.

(3) The First Trust ETF's portfolio turnover rate indicates how actively the First Trust ETF's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the First Trust ETF buying and selling all of the securities in its portfolio once in the course of the period/year. The higher a First Trust ETF's portfolio turnover rate in a period/year, the greater the trading cost payable by the First Trust ETF in the period/year, and the greater the chance of an investor receiving taxable capital gains in the period/year. There is not necessarily a relationship between high turnover rate and the performance of a First Trust ETF.
