Forward-looking Statements

This document may contain forward-looking statements relating to anticipated future events, results, circumstances, performance or expectations that are not historical facts but instead represent beliefs regarding future events. By their nature, forward-looking statements are based on assumptions and are subject to inherent risks and uncertainties. There is significant risk that forward-looking statements will not prove to be accurate. Readers of this document should not place undue reliance on forward-looking statements as a number of factors could cause actual future results, conditions, actions or events to differ materially from the expectations, estimates or intentions expressed or implied in the forward-looking statements. These factors include but are not limited to market and general economic conditions, interest rates, foreign currency exchange rates, the extent of industry sector exposure, the performance of the securities of the issuers held in the portfolio and regulatory developments and the risks detailed in the First Trust ETF’s prospectus. The Manager does not undertake and specifically disclaims any intention or obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

Investment Objective and Strategy

The fundamental investment objective of **First Trust Tactical Bond Index ETF** (the “First Trust ETF”) is to replicate, to the extent possible, the performance of the NASDAQ IBIS Canadian Preservation Index CAD TRSM (formerly named NASDAQ Canadian Preservation Index CAD TRSM) (the “Index”), net of expenses.

The investment strategy of the First Trust ETF is to invest in and hold the constituent securities of the Index in the same proportion as they are reflected in the Index or securities intended to replicate the performance of such Index. The First Trust ETF may also hold cash and cash equivalents or other money market instruments to fund current liabilities.

The Index seeks to construct a dynamic fixed income portfolio that provides exposure to several different fixed income asset classes and consists of ETFs.

The Manager may use a sampling methodology in selecting investments for the First Trust ETF. As an alternative or in conjunction with investing in and holding constituent securities, the First Trust ETF may also invest in other securities to obtain exposure to the constituent securities of the applicable Index in a manner that is consistent with the investment objective and investment strategy of the First Trust ETF.

Risk

The risks associated with an investment in the First Trust ETF remain as discussed in the First Trust ETF’s most recent prospectus. There have been no significant changes during the reporting period that affected the overall level of risk associated with the First Trust ETF.

Results of Operations

General

The First Trust ETF’s net asset value as of June 30, 2021 was \$5,046,960 or \$16.82 per unit. The First Trust ETF’s net asset value as of December 31, 2020 was \$4,953,788 or \$16.51 per unit.

For the six-month period ended June 30, 2021, the First Trust ETF paid total cash distributions per unit of \$0.2850. In addition, the First Trust ETF declared cash distributions per unit of \$0.0525 for record date of June 30, 2021 with payment date of July 8, 2021.

Investment Performance

For the six-month period ended June 30, 2021, the First Trust ETF returned 3.69% compared to the Index return of 4.04%. Unlike the Index, the First Trust ETF’s return is net of fees and expenses.

The return for the First Trust ETF in the first quarter of 2021 was 1.03%, and the Index returning 1.22%. Performance improved for the First Trust ETF and the Index in the second quarter of 2021, with First Trust ETF returning 2.63% and the Index returning 2.78%.

The First Trust ETF’s performance for the six-month period ended June 30, 2021 can be attributed to a persistent overweighting of the High Yield sector under the Fed’s quantitative easing environment.

The Index deploys a proprietary quantitative model that has the flexibility to decrease or increase duration and credit risk via a momentum-driven tactical overlay. Based on the current index positions, the Index's outperformance in this year can also be attributed to the persistent overweighting of High Yield sector under the Fed's easing environment. Comparing to the beginning of the year, the Index's exposure in High Yield related ETF funds has doubled from 41% to 80%. The High Yield bonds are credit sensitive investments and can be almost immune from the long-term interest rates rise.

Recent Developments

As the current index position is heavily tilted towards High Yield, it may be worth it to pay special attention to the credit market dynamics. Credit market's major indicators, such as High Yield and Investment Grade Option Adjusted Spreads (OAS), have both eased to the pre-pandemic low levels. With the fully recovered market condition, the Fed has reduced the size of its credit support programs aimed for corporate and main street banks. The currently only still expending program is the Paycheck Protection Program that supports the majority of American workers. The pandemic actually made the corporate balance sheet more resilient, comparing well to even before the Pandemic era. SPX and NDX-index estimated Cash flow both bypassed the previous peaked level at early 2019 and reached all-time high. This is a solid proof that the current ultra-loose credit spread level is actually well-supported by corporate fundamentals. We expect the Index's shift to overweight High Yield can still pay off well in the second half of the year 2021.

(1) This information is provided as at June 30, 2021 and December 31 of the years shown and is prepared under IFRS.

(2) Net asset value and distributions are based on the actual number of units outstanding at the relevant time. The increase/decrease from operations is based on the weighted average number of units outstanding over the period/year.

(3) Distributions were paid in cash or reinvested in additional units of the First Trust ETF, or both. Non-cash distributions are reinvested in additional units of the First Trust ETF and subsequently consolidated. Neither the number of units held by the unitholder, nor the net asset per unit of the First Trust ETF change as a result of any non-cash distributions.

(4) This table is not intended to be a reconciliation of beginning to ending net asset value per unit.

Ratios and Supplemental Data

Net asset value per unit	\$16.82	\$16.51	\$18.29	\$17.98	\$19.48	\$19.49

(1) Management expense ratio is based on total expenses (excluding commissions and other portfolio transaction costs) for the stated period/year, including the First Trust ETF's proportionate share of the MER of any underlying fund in which the First Trust ETF has invested, and is expressed as an annualized percentage of daily average net asset value during the period/year.

(2) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net asset value during the period/year. This includes the First Trust ETF's proportionate share of the commissions of any underlying fund in which the First Trust ETF has invested.

(3) The First Trust ETF's portfolio turnover rate indicates how actively the First Trust ETF's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the First Trust ETF buying and selling all of the securities in its portfolio once in the course of the period/year. The higher a First Trust ETF's portfolio turnover rate in a period/year, the greater the trading cost payable by the First Trust ETF in the period/year, and the greater the chance of an investor receiving taxable capital gains in the period/year. There is not necessarily a relationship between high turnover rate and the performance of a First Trust ETF.
