## Management Report of Fund Performance

### For the six-month period ended June 30, 2024

#### **Investment Objective and Strategy**

The fundamental investment objective of **First Trust Cloud Computing ETF** (the “First Trust ETF”) is to replicate, to the extent possible, the performance of an index of U.S. companies involved in the cloud computing industry, initially the ISE CTA Cloud Computing Index™.

The ISE CTA Cloud Computing Index™ is a modified equal weighted index designed to track the performance of companies involved in the cloud computing industry. To be included in the index, a security must be classified as a Cloud Computing company by the Consumer Technology Association.

#### **Risk**

The First Trust ETF provides exposure to its index by investing all or substantially all of its assets in an underlying U.S. index fund known as First Trust Cloud Computing ETF (the “Underlying Fund”), which is managed by the First Trust ETF's portfolio advisor.

The risks associated with an investment in the First Trust ETF is discussed in the First Trust ETF's most recent prospectus.

#### **Results of Operations**

##### **General**

The First Trust ETF's net asset value as of June 30, 2024, was \$2,529,608 or \$23.00 per unit. The First Trust ETF's net asset value as of December 31, 2023, was \$2,659,375 or \$20.46 per unit.

There were no cash distributions paid nor declared for the six-month period ended June 30, 2024.

##### **Investment Performance**

For the six-month period ended June 30, 2024, the First Trust ETF returned 12.41% compared to the S&P 500® Index (the “benchmark”) return of 19.64%. Unlike the benchmark, the First Trust ETF's return is net of fees and expenses.

The First Trust ETF's only holding, the Underlying Fund, held 62 equity securities as of June 30, 2024. The top ten equity holdings for the Underlying Fund accounted for 39.17% of the portfolio within the Underlying Fund.

The Underlying Fund underperformed the benchmark during the period due to stock selection within Information Technology. No weight in NVIDIA Corporation, for example, contributed notably to the underperformance. Despite poor stock selection within the sector, an overweight allocation to Information Technology overall, the best-performing sector during the period, mitigated the underperformance.

The Underlying Fund's top five stocks by contribution to return were Pure Storage, Inc., Arista Networks, Inc., AppLovin Corporation, Dell Technologies Inc., and Alphabet Inc. The Underlying Fund's bottom five stocks by contribution to return were Fastly, Inc., MongoDB, Inc., Lumen Technologies, Inc., Akamai Technologies, Inc., and Workiva Inc.

The First Trust's ETF's exposure to the U.S. dollar contributed positively to its absolute performance during the period, as the U.S. dollar appreciated 3.54% against the Canadian dollar from December 31, 2023, to June 30, 2024.

#### **Recent Developments**

Gartner forecasts cloud security spend to expand by 24% in 2024 and expects this spend to continue to grow over the coming years as companies continue to adopt security solutions for cloud infrastructure. Reasons supporting this forecast include the vulnerability of cloud storage to a larger number of threats, prioritizing of AI data security, and advancements in cloud security capabilities. Cloud spend is complimentary to AI and we continue to have a positive outlook on the space. Two of the leading AI companies, Open-AI and Hugging Face, have both announced data breaches within the past quarter – highlighting the importance of cloud security. The sweeping adoption of AI has

(1) Management expense ratio is based on total expenses (excluding commissions and other portfolio transaction costs) for the stated year, including the First Trust ETF's proportionate share of the MER of the Underlying Fund in which the First Trust ETF has invested, and is expressed as an annualized percentage of daily average net asset value during the period/year.

(2) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net asset value during the period/year. This includes the First Trust ETF's proportionate share of the commissions of Underlying Fund in which the First Trust ETF has invested.

(3) The First Trust ETF's portfolio turnover rate indicates how actively the First Trust ETF's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the First Trust ETF buying and selling all of the securities in its portfolio once in the course of the period/year. The higher a First Trust ETF's portfolio turnover rate in a period/year, the greater the trading cost payable by the First Trust ETF in the period/year, and the greater the chance of an investor receiving taxable capital gains in the period/year. There is not necessarily a relationship between high turnover rate and the performance of a First Trust ETF.
